

VIKASHINI VITYARTHI PROJECT PROGRAMING

ATM Simulator – Python Program

This Python program demonstrates a basic ATM simulation with PIN verification, balance checking, money deposit, money withdrawal, insufficient-balance validation, and an exit option.

SOURCE CODE

```
# CHECKING ATM BALANCE

def check_balance(balance):
    print("Your current balance is: ■", balance)

def deposit_money(balance):
    amount = float(input("Enter amount to deposit: ■"))

    if amount > 0:
        balance = balance + amount
        print("■", amount, "deposited successfully.")
        print("Updated balance: ■", balance)
    else:
        print("Invalid amount.")

    return balance

def withdraw_money(balance):
    amount = float(input("Enter amount to withdraw: ■"))

    if amount <= 0:
        print("Invalid amount.")
    elif amount > balance:
        print("Insufficient balance.")
    else:
        balance = balance - amount
        print("Please collect your cash.")
        print("Remaining balance: ■", balance)

    return balance

print("=====")
print("      WELCOME TO ATM")
print("=====")

pin = 1234
entered_pin = int(input("Enter your PIN: "))

if entered_pin == pin:

    balance = 10000

    while True:
        print("\n----- ATM MENU -----")
        print("1. Check Balance")
        print("2. Deposit Money")
        print("3. Withdraw Money")
        print("4. Exit")
        print("-----")

        choice = input("Enter your choice: ")

        if choice == "1":
            check_balance(balance)
        elif choice == "2":
